

Join Northwest Cadence for fresh brewed coffee, a variety of specialty coffee cakes, and some morning ALM discussions that are sure to wake you up and get your day off to a great start!

Testers Get Professional

Join Northwest Cadence for an interactive, real-world walkthrough of the latest testing practices using Visual Studio 2010 tools.

We will show you how to configure a test plan and build out measurable, integrated test cases for existing software or Acceptance Test-Driven Development of new work. We will use Microsoft Test Manager for some exploration, and show how non-technical testers can report results and defects with all the detailed logging and reproducibility their developers demand. To close the loop on our lifecycle we will have a tester record a manual test in MTM, then hand off the recording to a developer for the fastest, most robust automated UI test generation you've ever seen.

What are Coffee Talks, you ask? As the name suggests, these are morning ALM discussions that are sure to wake you up and get your day off to a great start! For our LIVE Coffee Talk events, hosted at The Microsoft Store, we will serve coffee (and some tasty coffee cakes!) and provide live demonstrations of Visual Studio features on the theatre's big screen. We will have special giveaways and door prizes to make it even more fun! When we're finished, you will have plenty of time to get to the office – or stay a little longer and play in the Store before it opens!
